

Master of Gold

MASTER OF GOLD

MT5 TRADING HANDBOOK

A Professional Guide to Understanding
MT5, Brokers, and Gold Trading

MASTER MT5
PLATFORM

CHOOSE WISELY
TRADE SAFELY

TRADE GOLD
WITH PRECISION

KNOWLEDGE. STRATEGY. DISCIPLINE. CONSISTENCY.

MASTER THE MARKETS.

00 IMPORTANT NOTICE

Read this before using MT5 or opening a broker account.

HIGH-RISK PRODUCT

Gold, forex and CFD trading can create fast losses. Leverage magnifies both gains and losses. A Stop Loss reduces risk, but cannot guarantee an exact exit during gaps or fast markets.

This handbook explains platform mechanics and general risk concepts. It is not personalized financial advice, a promise of profit, or a recommendation to open a live account.

AGE AND ACCOUNT ELIGIBILITY

Ontario's age of majority is 18. Broker eligibility, identity checks and account documentation vary. Anyone not eligible for a live account should use MT5 only in demo mode and must never misstate age or identity.

What Master of Gold is - and is not

- **Master of Gold:** an education and signal brand that may publish trade ideas and learning material.
- **MetaTrader 5:** software used to view prices, analyze charts and send trading instructions.
- **The broker:** the financial firm that creates the account, supplies prices and symbols, sets trading conditions, executes orders, holds funds and processes withdrawals.

CORE RULE

You are responsible for every order placed in your account. Read the signal, verify the ticket, set the size from your own risk limit, and review before submitting.

Security rules

☒ Never share a broker password, one-time code, recovery phrase, card number or identity document through social media.

☒ Use unique passwords and multi-factor authentication where available.

☒ Do not install remote-access software for someone claiming they can trade or withdraw for you.

☒ Confirm the broker's legal entity and official domain before depositing money.

00 CONTENTS

Move through the handbook in order.

Foundation

CHAPTER	TOPIC
01	MT5, Master of Gold and the broker
02	Accounts, login and setup
03	MT5 screen and gold specification
04	Buy and sell basics
05	Open a market trade - desktop
06	Open a market trade - mobile

Execution & control

CHAPTER	TOPIC
07	Stop Loss, Take Profit and management
08	Close full or partial trades
09	Pending orders
10	Lots, points, spread, commission and swap
11	Leverage, margin and stop-out
12	Risk and position sizing

Market reality

CHAPTER	TOPIC
13	Execution, slippage, news and market hours
14	How to check a broker in Ontario
15	Reading a Master of Gold signal

Practice & reference

CHAPTER	TOPIC
16	Mistakes, troubleshooting and demo practice
17	Glossary and official references
MOG	Final operating rules

RECOMMENDED PATH

Complete Chapters 1-13 on a demo account. Then use the Chapter 16 checklist until you can place, modify and close trades without guessing.

01 MT5, MASTER OF GOLD AND THE BROKER

Understand the roles before pressing Buy or Sell.

Deposits and withdrawals happen through the **broker** - not through MetaTrader and not through Master of Gold. MT5 is the interface that sends your instructions to the broker's server.

What the broker controls

BROKER SETTING	WHY IT MATTERS
Symbol name	Gold may appear as XAUUSD, GOLD, XAUUSD.a, XAUUSDm or another broker-specific name.
Contract size	Determines how much metal one lot represents.
Minimum volume & step	Controls the smallest lot and valid increments, such as 0.01.
Spread, commission & swap	These costs affect the result.
Leverage & margin	Determine how much margin is required.
Stops level & sessions	Control allowed SL/TP distance and when orders may execute.
Execution policy	Affects fills, partial fills, rejection and slippage.

KEY DISTINCTION

Installing MT5 does not create a trading account. Your account number, password and server come from a broker.

02 ACCOUNTS, LOGIN AND SETUP

Start with demo. Keep live money separate from practice.

Demo account

Uses simulated funds with live or delayed broker prices. This is the correct place to learn buttons, order types and risk calculations. Demo execution may not perfectly match live conditions, but mistakes do not risk real money.

Live account

Uses real funds and requires broker approval. Deposits, withdrawals, identity checks and tax records are handled through the broker, not the MT5 app.

FOR LEARNERS

Use a demo account until every step is routine. Never use a false age, borrowed identity or another person's account to bypass eligibility rules.

The three login details

01 • ACCOUNT

Login number

Identifies the trading account.

02 • SECURITY

Password

Authorizes trading. Some brokers also provide a read-only investor password.

03 • CONNECTION

Server

Connects MT5 to the correct broker environment. Demo and live servers are normally different.

Desktop login

- 1 Install MT5 from the broker or official MetaTrader source.
- 2 Open **File** → **Login to Trade Account**.
- 3 Enter the login, password and exact server.
- 4 Confirm prices update, then find the broker's gold symbol.

Mobile login

- 1 Open **Manage Accounts** and tap the plus sign.
- 2 Search the broker name and choose the correct server.
- 3 Enter login and password.
- 4 Confirm quotes update before opening any order screen.

03 MT5 SCREEN AND GOLD SPECIFICATION

Learn where information lives and what must be checked.

MAIN DESKTOP AREAS

Market Watch, Chart, Navigator, Toolbox - Trade, Toolbox - History, and Symbol Specification.

Where information lives

AREA / TAB	PURPOSE
Market Watch / Quotes	Symbols, Bid, Ask and quick access to New Order.
Chart	Price history, timeframe, indicators and trade levels.
Trade	Positions, orders, balance, equity, margin and free margin.
History	Deals, deposits, withdrawals, commissions and reports.
Specification	Contract size, digits, tick size/value, volume limits, sessions, margin and swap.

Open the gold specification

✓ Find the exact gold symbol in Market Watch or Quotes.

✓ Open the symbol menu and choose Specification, Properties or Details.

✓ Record contract size, digits, tick size and tick value.

✓ Record minimum lot, volume step, stops level, sessions, commission and swap.

DO NOT ASSUME

Gold contract size and point conventions can differ by broker and account. Always read the specification before calculating risk.

04 BUY AND SELL BASICS

Direction, entry, exit and costs.

BUY • LONG

You expect price to rise

- Normally opens at the **Ask**.
- Normally closes at the **Bid**.
- Protective SL is typically below entry.
- TP is typically above entry.

SELL • SHORT

You expect price to fall

- Normally opens at the **Bid**.
- Normally closes at the **Ask**.
- Protective SL is typically above entry.
- TP is typically below entry.

Bid, Ask and spread

BID • 4089.10

Price normally used to open a Sell and close a Buy.

0.20
spread

ASK • 4089.30

Price normally used to open a Buy and close a Sell.

EXAMPLE ONLY

A Buy at 4,089 and close at 4,093 has a positive price difference of 4.00 before spread, commission, swap and conversion. The cash result still depends on lot size and contract specification.

Order, deal and position

INSTRUCTION

Order

Your instruction to the broker.

EXECUTION

Deal

An execution created when an order fills.

EXPOSURE

Position

The current market exposure that remains open.

05 OPEN A MARKET TRADE - DESKTOP

Use the full order window until the process is automatic.

SYMBOL	XAUUSD
VOLUME	0.10
STOP LOSS	4084.00
TAKE PROFIT	4098.00
TYPE	Market Execution
SELL BY MARKET BUY BY MARKET	

ORDER TICKET ANATOMY

Always confirm the account, symbol, volume, direction, SL and TP before submission.

Step-by-step

- 1 Confirm the correct account and broker server.
- 2 Right-click the gold symbol and choose **New Order**, or press F9.
- 3 Confirm the exact symbol and set Volume from your own risk calculation.
- 4 Choose Market Execution or the broker's available market mode.
- 5 Enter valid Stop Loss and Take Profit prices.
- 6 Review direction one last time and submit once.
- 7 Verify entry, volume, SL, TP and floating result in Toolbox → Trade.

BEFORE CLICKING

A signal price may no longer match the live price. If the market moved away from the planned entry, do not chase automatically.

COMMON MESSAGE	LIKELY MEANING	ACTION
Market closed	Broker session is not open.	Check trading sessions.
Invalid volume	Outside min/max or not aligned to step.	Use a valid lot increment.
Invalid stops	SL/TP violates distance or direction rules.	Review specification.
Not enough money	Insufficient free margin.	Reduce size; do not force.

06 OPEN A MARKET TRADE - MOBILE

Use deliberate taps and verify every field.

Android / iPhone flow

- 1 Open Quotes and tap the broker's gold symbol.
- 2 Tap **Trade** or **New Order**.
- 3 Confirm symbol, order type and Volume.
- 4 Enter valid SL and TP, if known.
- 5 Review live Bid, Ask, spread and movement.
- 6 Tap Buy or Sell once, then verify the position in Trade.

INTERFACE NOTE

Labels can differ by Android, iPhone, broker build and app version.
The logic remains: symbol, type, volume, SL, TP, review, submit, verify.

Mobile error prevention

Turn off One Click Trading while learning.

Never place a trade while driving, walking or distracted.

Check that the keyboard did not change a decimal or remove a digit.

After reconnecting, verify the account and every open position first.

THREE TAKE-PROFIT LEVELS

Use split positions, partial closes, or one final TP. Total combined risk must remain inside your risk cap.

07 STOP LOSS, TAKE PROFIT AND MANAGEMENT

Protective levels must be valid, visible and intentional.

Illustrative Buy layout: TP above entry, SL below entry.

Stop Loss

Instruction intended to close the position at a loss-control level. Essential risk control, but not a guarantee of exact fill during gaps, fast markets or low liquidity.

Take Profit

Instruction intended to close the position at a target. It can remove emotion, but may close before a larger move continues.

Modify on desktop

- 1 Open Toolbox → Trade.
- 2 Right-click the exact position.
- 3 Choose Modify Position.
- 4 Enter valid SL/TP and confirm the values update.

Modify on mobile

- 1 Open the Trade tab.
- 2 Tap and hold the exact position.
- 3 Choose Modify Position.
- 4 Enter valid SL/TP and verify the update.

MANAGEMENT ACTION	MEANING	MAIN RISK
Move to break-even	Move SL near entry after sufficient favorable movement.	Spread or slippage can still create a small loss.
Trail manually	Move SL behind price structure.	Too close can exit on normal noise.
Trailing Stop tool	Platform automatically moves SL by a set distance.	Desktop terminal may need to remain open and connected.

NEVER WIDEN RISK CASUALLY

Moving a Stop Loss farther away after entry increases the planned loss. Do not move it only to avoid accepting a losing trade.

08 CLOSE FULL OR PARTIAL TRADES

Closing converts floating P/L into a realized result.

Close on desktop

- 1 Open Toolbox → Trade.
- 2 Double-click the position or choose Close Position.
- 3 Use full volume for a full close, or a smaller valid amount for partial close.
- 4 Click Close once and verify remaining volume.
- 5 Check History for the deal and realized result.

Close on mobile

- 1 Open the Trade tab and tap the position.
- 2 Choose Close Position.
- 3 Review symbol, live close price and volume.
- 4 Confirm full or partial volume and close once.
- 5 Verify the result and any remaining volume.

HEDGING VS NETTING

In hedging accounts, use Close Position on the exact ticket. Opening the opposite direction may create a second position. In netting accounts, opposite deals reduce, close or reverse the single net position.

Partial-close example

STARTING POSITION • 0.03 LOT

0.01 • TP1

0.01 • TP2

0.01 • TP3

Operational example only. The broker volume step must allow each close.

Cancel a pending order

☒ Find the pending order in Trade.

☒ Choose Modify or Delete.

☒ Press Delete / Cancel once.

☒ Verify it is removed and appears as canceled in History.

09 PENDING ORDERS

Plan an entry before price reaches the level.

BUY STOP

Above current price. Buy after an upside breakout trigger.

SELL LIMIT

Above current price. Sell a rally at a higher price.

CURRENT PRICE

BUY LIMIT

Below current price. Buy a pullback at a lower price.

SELL STOP

Below current price. Sell after a downside breakout trigger.

Place a pending order

- 1 Open New Order and choose Pending Order.
- 2 Select Buy Limit, Sell Limit, Buy Stop or Sell Stop.
- 3 Enter trigger price, valid volume, SL and TP.
- 4 Choose expiration if supported.
- 5 Review distance and submit once.
- 6 Confirm it appears as an order - not a position.

Limit order

Seeks the requested price or better, but may not fill if price and liquidity do not meet the condition.

Stop order

Activates after the trigger and becomes executable. Fast movement can create slippage.

TRIGGERED DOES NOT MEAN EXACT

A pending order can execute at a different available price during gaps or fast markets. Always size risk with execution uncertainty in mind.

10 LOTS, POINTS, SPREAD, COMMISSION AND SWAP

Contract details turn price movement into cash results.

Lot and contract size

A lot is the platform's volume unit. Cash exposure depends on the broker's contract size. Illustration only: if 1.00 lot equals 100 ounces, then 0.01 lot equals 1 ounce. Never assume this for your account.

USE SPECIFICATION

The best inputs are the current broker symbol specification and your demo trade history - not a universal social-media pip table.

Volume fields

FIELD	MEANING
Minimum volume	Smallest allowed position.
Maximum volume	Largest allowed per order.
Volume step	Allowed increment between sizes.
Contract size	Quantity represented by one lot.
Tick size / value	Smallest price movement and its cash value.

Trading costs

COST	WHAT IT IS	WHEN IT APPEARS
Spread	Difference between Bid and Ask.	Built into entry and exit prices.
Commission	Broker transaction fee.	At open, close or both.
Swap / financing	Overnight holding adjustment.	When a position passes rollover.
Conversion	Converts instrument result to account currency.	When currencies differ.
Slippage	Difference between expected and executed price.	Fast, gapping or thin markets.

ILLUSTRATIVE PROFIT CALCULATION

BUY: $(\text{close price} - \text{open price}) \times \text{contract size} \times \text{lots}$

For a Sell, reverse the price difference. Then account for spread, commission, swap and currency conversion. MT5 performs the final broker-specific calculation.

11 LEVERAGE, MARGIN AND STOP-OUT

Leverage changes required margin - not market risk.

BALANCE

\$5,000

Account value after closed transactions.

EQUITY

\$4,920

Balance plus current floating results.

USED MARGIN

\$420

Funds reserved to support positions.

FREE MARGIN

\$4,500

Equity minus used margin.

MARGIN LEVEL

1,171%

Equity ÷ margin × 100.

STOP-OUT

Broker rule

Automatic closing may begin at a defined threshold.

Core account metrics

METRIC	PLAIN MEANING
Balance	Account value after closed transactions, excluding floating P/L.
Equity	Balance plus floating P/L and broker adjustments.
Margin	Funds reserved to support open positions.
Free margin	Equity minus margin; the cushion for new trades and losses.
Margin call	Warning or state when account health reaches a broker threshold.
Stop-out	Broker may automatically close positions at a defined margin level.

Leverage example

Illustration only: a \$10,000 notional position at 1:50 may require about \$200 of margin before symbol-specific adjustments. The position still moves as a \$10,000 exposure.

DO NOT MAXIMIZE LEVERAGE

Available leverage is a limit, not a target. Using all free margin leaves little room for normal price movement and can trigger forced closing.

12 RISK AND POSITION SIZING

Decide maximum loss before deciding lot size.

A safer order of decisions

- 1 Choose the market idea and invalidation level.
- 2 Measure entry-to-Stop-Loss distance.
- 3 Choose a maximum cash loss the account can absorb.
- 4 Use tick value or the broker calculator to find volume.
- 5 Round down to a valid volume step.
- 6 Re-check total risk across all open positions.

ILLUSTRATIVE FORMULA

Maximum cash risk = account equity × chosen risk %

No percentage makes leveraged trading safe.

Position-size worksheet

INPUT	YOUR VALUE
Account equity	_____
Maximum cash loss	_____
Entry price	_____
Stop Loss price	_____
Stop distance	_____
Tick size / tick value	_____
Calculated volume	_____
Rounded-down volume	_____
Cost buffer	_____

Illustrative 0.5% cap

DEMO EQUITY	ILLUSTRATIVE CAP	MEANING
\$1,000	\$5	Planned loss, including likely costs, should stay near or below \$5.
\$5,000	\$25	Total risk across split positions stays inside the same cap.
\$10,000	\$50	A wider SL requires smaller volume to keep cash risk fixed.

SPLIT TRADES CORRECTLY

If you open positions for TP1, TP2 and TP3, the sum of their risks is the trade risk. Never calculate each as if it were the only position.

13

EXECUTION, SLIPPAGE, NEWS AND MARKET HOURS

A correct click can still receive a different fill.

Execution outcomes

FILLED

The broker executed the order and created a deal / position.

PARTIAL FILL

Only part of requested volume executed, if supported.

REJECTED

The server did not accept the request.

PENDING

The order waits for its price condition.

SLIPPAGE

Execution occurred at a different available price.

GAP

Price jumped between levels with little or no trading.

High-impact news

Economic releases and unexpected headlines can widen spreads and create rapid price movement. Pending orders and Stop Losses may fill at worse prices than planned. A news spike is never guaranteed profit.

Market hours

Gold sessions and daily maintenance breaks are set by the broker and may use server time rather than Toronto time. Server time also affects candles, rollover and history timestamps.

ONE CLICK TRADING

Orders send immediately with fewer confirmation steps. Useful for experienced operators but increases wrong-volume, wrong-direction and duplicate-order risk. Leave it off while learning.

CONNECTION LOSS

Server-side SL/TP normally remain with the broker after acceptance. Desktop trailing stops are commonly terminal-managed and may stop updating if MT5 closes or disconnects.

14 HOW TO CHECK A BROKER IN ONTARIO

Verify the legal entity before sending money.

Practical verification process

- 1 Write the exact legal entity name - not only the brand or app name.
- 2 Search CIRO's dealer directory and Canadian registration records.
- 3 Check OSC investor warnings for the company, site and similar names.
- 4 Match the official domain, contact details and legal disclosures.
- 5 Read client agreement, risk disclosure, execution policy, fees and withdrawal rules.
- 6 Inspect XAUUSD on demo before depositing.

Red flags

- ✓ Guaranteed returns, fixed daily profit or deposit pressure.
- ✓ The brand does not match the legal entity receiving money.
- ✓ The website appears in an OSC warning or cannot be verified.
- ✓ A social-media agent requests MT5 password or remote access.
- ✓ Withdrawal requires a new tax, insurance or unlock fee to a private wallet.
- ✓ The company encourages hiding the account or bypassing age / identity rules.

Official checks

- 1 **CIRO - Dealers We Regulate** [OPEN](#)
Search the regulated dealer directory.
- 2 **OSC - Investor Warnings and Alerts** [OPEN](#)
Check current Ontario warnings.

MASTER OF GOLD AND BROKER CHOICE

A signal channel should never control your account or withdrawal. Account security, order decisions and risk limits must remain under your control.

15 READING A MASTER OF GOLD SIGNAL

Convert a signal into a verified plan - not a blind click.

NEW TRADE IDEA

[BUY](#)

XAUUSD • 4089

TP1
4093

TP2
4094

TP3
4120

STOP LOSS
4065

Educational example only. Size must come from your own risk calculation.

ABOUT "DOUBLE LOT SIZE"

Never double volume simply because a message says so. The only acceptable volume is one that keeps total planned loss inside your preset maximum.

Signal-to-order checklist

- 1 Confirm the signal is current and not canceled or updated.
- 2 Confirm XAUUSD matches your broker's gold instrument.
- 3 Identify market, limit, stop or price-zone entry.
- 4 Measure SL distance and calculate volume from your own cash-risk limit.
- 5 Choose split positions or partial closes for TP1/TP2/TP3.
- 6 Check spread and movement; do not chase a missed entry.
- 7 Review the ticket and verify the Trade tab after execution.

Signal updates

UPDATE	OPERATIONAL MEANING
TP1 hit	Verify whether the planned first portion closed or manually close the intended amount.
Move SL to entry	Modify SL to the intended break-even level while accounting for spread and costs.
Secure 70%	Close only the stated portion if it matches your plan and valid volume step.
Cancel pending	Delete the order before it triggers and verify it is gone.

16 MISTAKES AND TROUBLESHOOTING

Build reliable habits before risking money.

COMMON MISTAKE	BETTER PROCESS
Wrong direction	Say "Buy expects up" or "Sell expects down" before submitting.
Wrong decimal / extra zero	Read volume and each price digit aloud.
Copying signal lot size	Calculate volume from your account and SL distance.
No Stop Loss	Do not open until the exit level is accepted.
Multiple clicks	Click once, wait for server response, then inspect Trade.
Closing wrong ticket	Match symbol, direction, volume and ticket before closing.
Opening opposite to close	Use Close Position, especially on hedging accounts.
Ignoring costs	Include spread, commission and swap in review.
Trading during disconnect	Restore connection and inspect all positions first.
Chasing a missed entry	Wait for a new valid setup instead of increasing risk.

Rapid account-damage rules

- No doubling volume after a loss.
- No adding to a losing position without a written maximum combined risk.
- No trade without an exit plan.
- No live trade to learn a button or test an order type.
- Stop for the session after a preset daily loss limit.

When something looks wrong

- Do not click repeatedly.
- Take a screenshot of the ticket or Trade tab.
- Check symbol, server, connection and specification.
- Review the Journal / Messages tab.
- Use broker support through the official site.

16 DEMO PRACTICE AND PRE-TRADE CHECK

Practice until execution is calm and repeatable.

Seven-session demo plan

SESSION 1	SESSION 2	SESSION 3	SESSION 4	SESSION 5	SESSION 6	SESSION 7
Login, find XAUUSD, open Specification, identify Bid and Ask.	Open and close one tiny demo Buy and one tiny demo Sell.	Add and modify SL / TP; verify levels on the chart.	Place, modify and cancel each pending order.	Practice partial closing and split-position TP management.	Calculate risk from tick value and compare with History.	Run ten simulated signals with zero order errors.

10-second pre-trade check

☒ Correct account: demo or live?	☒ Correct broker server?
☒ Correct gold symbol?	☒ Correct direction: Buy or Sell?
☒ Volume calculated from risk?	☒ Entry still valid - not chased?
☒ Stop Loss entered and accepted?	☒ Take Profit / management plan set?
☒ Spread and market conditions acceptable?	☒ No major distraction or emotional pressure?
☒ Click only once and wait?	☒ Verify ticket, volume, SL and TP afterward?

“The goal of practice is not speed. It is accuracy without hesitation.”

17 GLOSSARY

Keep this section near your trading desk.

TERM	DEFINITION
Ask	Price normally used to open a Buy.
Balance	Account value after closed transactions.
Bid	Price normally used to open a Sell.
Broker	Firm providing account, pricing, execution and withdrawals.
Commission	Direct transaction fee.
Deal	An executed transaction.
Equity	Balance plus floating results and adjustments.
Free margin	Equity minus used margin.
Hedging	Account system allowing multiple positions on one symbol.
Leverage	Ratio reducing required margin for exposure.
Limit order	Pending order seeking a specified price or better.
Lot	Trading volume unit defined by the contract.

TERM	DEFINITION
Margin	Funds reserved to support open positions.
Margin level	$\text{Equity} \div \text{margin} \times 100$.
Market order	Instruction to trade at available conditions.
Netting	Account system with one net position per symbol.
Pending order	Instruction waiting for a future price condition.
Position	Current open market exposure.
Slippage	Difference between expected and actual execution.
Spread	Difference between Bid and Ask.
Stop Loss	Exit instruction intended to control loss.
Stop-out	Broker action that may close positions at low margin health.
Swap	Overnight financing adjustment.
Take Profit	Exit instruction intended to realize profit at a target.
Tick	Minimum price movement used in symbol calculation.

PROFESSIONAL HABIT

When terminology is unclear, open the broker's symbol Specification and official platform help before placing the order.

ACCESS NOTE

Official sources were checked for the original handbook on August 5, 2026. Platform menus, broker rules and regulatory information can change; always verify current details before acting.

FINAL OPERATING RULES

A simple standard for every Master of Gold learner.

1

DEMO FIRST

Learn every button without risking real money.

2

VERIFY THE BROKER

Check the legal entity and Ontario warnings.

3

READ SPECIFICATION

Never assume gold contract size, tick value or sessions.

4

RISK BEFORE SIZE

Decide maximum loss before choosing volume.

5

SL BEFORE ENTRY

No exit plan means no trade.

6

REVIEW BEFORE CLICK

Account, symbol, direction, volume, entry, SL and TP.

7

NEVER CHASE OR DOUBLE

Missed entries and losses do not justify bigger risk.

8

CONFIRM AFTER EXECUTION

Check Trade tab, ticket, volume and levels.

9

PROTECT ACCESS

Never share passwords, codes or remote control.

10

RECORD AND REVIEW

Use History to learn from every demo trade.

Education, discipline and risk control come before profit.

masterofgold.ca • t.me/masterofgoldsignals • [@masterofgoldsignals](https://twitter.com/masterofgoldsignals)
